

(*) Date and Time Functions:-

- 1.) TODAY() $\Rightarrow$ Returns the current date. It updates automatically whenever the worksheet recalculates. This function is dynamic whereas we can use (ctrl + ;) but it is static & will not change tomorrow.

Syntax: = TODAY()

Example: = TODAY() O/p $\rightarrow$ 07-10-2026

2.) NOW() $\Rightarrow$ Returns the current date & time
 Syntax: $=NOW()$
 Example: $=NOW()$ o/p $\rightarrow$ 07-10-2026 18:51
 This is dynamic & short cut is
 (Ctrl + Shift + :) which is Static.

3.) DAY() $\Rightarrow$ Extracts the day of the month from a date.
 Syntax: $=DAY(\text{serial_number})$
 Example: $=DAY("07-10-2026")$ o/p $\rightarrow$ 7.

4.) MONTH() $\Rightarrow$ Extracts the month number from a date.
 Syntax: $=MONTH(\text{serial_number})$
 Example: $=MONTH("07-10-2026")$ o/p $\rightarrow$ 10.

5.) YEAR() $\Rightarrow$ Extracts the year from a date.
 Syntax: $=YEAR(\text{serial_number})$
 Example: $=YEAR("07-10-2026")$ o/p $\rightarrow$ 2026.

6.) HOURL() $\Rightarrow$ Extracts the hour from a time.
 Syntax: $=HOUR(\text{serial_number})$
 Example: $=HOUR("18:51:44")$ o/p $\Rightarrow$ 18

7.) MINUTE() $\Rightarrow$ Extracts the minutes from a time.
 Syntax: $=MINUTE(\text{serial_number})$
 Example: $=MINUTE("18:51:44")$ o/p $\Rightarrow$ 51

8.) SECOND() $\Rightarrow$ Extracts the seconds from a time.
 Syntax: $=SECOND(\text{serial_number})$
 Example: $=SECOND("18:51:44")$ o/p $\Rightarrow$ 44

9.) WEEKDAY () $\Rightarrow$ Returns the day of the week as a number.

By default : > Sunday = 1
 > Monday = 2
 > Tuesday = 3
 > Wednesday = 4
 > Thursday = 5
 > Friday = 6
 > Saturday = 7.

Syntax : = WEEKDAY (serial_number, [return_type])

Example : = WEEKDAY ("07-10-2026") o/p - 4 $\rightarrow$ Wednesday.

10.) WEEKNUM () $\Rightarrow$ Returns the week number of a particular date in the year.

Syntax : = WEEKNUM (serial_number, [return_type])

Example : = WEEKNUM ("07-10-2026") o/p - 41.

11.) DATE () $\Rightarrow$ Creates a date for a given year, month and day.

Syntax : = DATE (year, month, day)

Example : = DATE (2026, 10, 7) o/p - 07-10-2026

12.) TIME () $\Rightarrow$ Creates a time from hours, minutes, and seconds.

Syntax : = TIME (hour, minute, second)

Example : = TIME (18, 51, 44) o/p - 18:51:44
