

(*) SUM() :- Adds all the numbers in a selected range.

Syntax: =SUM(range)

Example: =SUM(G2:G21).

Output: Adds all numbers from G2 to G21.

(*) AVERAGE():- Calculates the average (mean) of numbers.

Syntax: =AVERAGE(range)

Example: =AVERAGE(G2:G21) or If salaries are ₹5000, ₹10,000 & ₹15,000.

Output: ₹10000.

(*) MAX():- Finds the largest value in a range.

Syntax: =MAX(range).

Example: =MAX(G2:G21)

Output: Returns highest Salary.

(*) MIN():- Finds the smallest value in a range.

Syntax: =MIN(range)

Example: =MIN(G2:G21)

Output: Returns the lowest Salary.

(*) COUNT():- Counts cells containing numbers only.

Syntax: =COUNT(range)

Example: =COUNT(G2:G21)

Output: Counts how many salary cells contain numeric values.

(*) COUNTA():- Counts all non-empty cells, including text & numbers.

Syntax: =COUNTA(range).

Example: =COUNTA(B2:B21).

Output: Counts the employee names that are not blank.

(*) LARGE():- Finds the N^{th} largest value in a range.

Syntax: $=LARGE(\text{range}, K)$.

Here, 'K' represents the position.

Example: $=LARGE(G2:G21, 2)$

Output: 2nd largest value returns.

(*) SMALL():- Finds the N^{th} smallest value in a range.

Syntax: $=SMALL(\text{range}, K)$.

Example: $=SMALL(G2:G21, 3)$.

Output: returns 3rd smallest number.

(*) UNIQUE():- Returns only unique / distinct values, removing duplicates.

Syntax: $=UNIQUE(\text{array})$.

Example: $=UNIQUE(G2:G21)$.

If the salaries are:	5000	UNIQUE() returns:
	6000	5000
	5000	6000
	7000	7000
	6000	

For the 2nd largest unique salary, you can combine it with LARGE:

$=LARGE(UNIQUE(G2:G21), 2)$.

(*) SUMIF():- Adds values that meet one specific condition.

Syntax: $=SUMIF(\text{range}, \text{criteria}, \text{sum-range})$.

Example: ^{Total} Salary of Marketing employees:

$=SUMIF(F2:F21, "Marketing", G2:G21)$.

• F2:F21 → Department range,

• "Marketing" → Condition, • G2:G21 → Salary range.

> SUMIF() with a number condition :- Adds salaries based on a numerical condition.

Syntax : $=\text{SUMIF}(\text{range}, \text{criteria}, \text{sum-range})$.

Example: Total salary of employees earning £10000 :- $=\text{SUMIF}(G2:G21, 10000, G2:G21)$.

Example: Total salary above £10000 :-
 $=\text{SUMIF}(G2:G21, ">10000", G2:G21)$.

(*) AVERAGEIF() :- Calculates the average of values that satisfy a condition.

Syntax : $=\text{AVERAGEIF}(\text{range}, \text{criteria}, \text{average-range})$.

Example: Average salary of West region employees:
 $=\text{AVERAGE}(E2:E21, "W", G2:G21)$.

Here, "W" represents the West region.

(*) MAXIFS() :- Finds the maximum value that meets one or more conditions.

Syntax : $=\text{MAXIFS}(\text{max-range}, \text{criteria-range}, \text{criteria})$.

Example: Maximum salary in R&D department:
 $=\text{MAXIFS}(G2:G21, F2:F21, "R\&D")$.

- $G2:G21 \rightarrow$ Salary range.
- $F2:F21 \rightarrow$ Department range.
- "R&D" $\rightarrow$ Condition.
